

Insert Datable

Insert all rows from a datatable into an existing table in the database.

The column names, and data types must match the destination table in the database.

Properties

Connection	Input (optional)	System.Database.SQLite.SQLiteConnection	An already opened SQLite connection. <i>This property is not necessary if the database path is provided.</i>
DatabaseFullPath	Input (optional)	System.String	The database full file path. <i>This property is not necessary if a connection is provided.</i>
Datable	Input	System.Data.Datable	The datatable with the data.
Table	Input	System.String	The name of the table to insert the data.
