Execute Non Query

Execute a SQL command without query result.

Execute non queryable (with no result dataset) SQL commands, such as:

- `INSERT INTO`
- `UPDATE`
- `DELETE`
- `CREATE TABLE`

and so on...

Properties

Name	Output / Input	Type	Description
Connection	Input (optional)	System.Database.SQLite.SQLiteConnection	An already opened SQLite connection. *This property is not necessary if the database path is provided.*
DatabaseFullPath	Input (optional)	System.String	The database full file path. *This property is not necessary if a connection is provided.*
SQLCommand	Input	System.String	The SQL command to be executed. Params must be provided within the SQL string.
